<b>I Geometry of chaos</b>	<b>1</b>
<b>1 Overture</b>	<b>3</b>
1.1 Why ChaosBook? . . . . .	4
1.2 Chaos ahead . . . . .	5
1.3 The future as in a mirror . . . . .	6
1.4 A game of pinball . . . . .	11
1.5 Chaos for cyclists . . . . .	15
1.6 Change in time . . . . .	21
1.7 To statistical mechanics . . . . .	24
1.8 Chaos: what is it good for? . . . . .	25
1.9 What is not in ChaosBook . . . . .	28
résumé 28 commentary 30 guide to exercises 33 exercises 34 references 34	
<b>2 Go with the flow</b>	<b>37</b>
2.1 Dynamical systems . . . . .	37
2.2 Flows . . . . .	42
2.3 Computing trajectories . . . . .	47
résumé 48 commentary 48 exercises 51 references 52	
<b>3 Discrete time dynamics</b>	<b>55</b>
3.1 Poincaré sections . . . . .	56
3.2 Computing a Poincaré section . . . . .	62
3.3 Mappings . . . . .	63
3.4 Charting the state space . . . . .	67
résumé 70 commentary 71 exercises 73 references 74	
<b>4 Local stability</b>	<b>75</b>
4.1 Flows transport neighborhoods . . . . .	75
4.2 Linear flows . . . . .	79
4.3 Stability of flows . . . . .	84
4.4 Neighborhood volume . . . . .	89
4.5 Stability of maps . . . . .	91
résumé 94 commentary 94 exercises 96 references 96	

<b>5 Cycle stability</b>	<b>99</b>
5.1 Stability of periodic orbits . . . . .	99
5.2 Floquet multipliers are invariant . . . . .	104
5.3 Stability of Poincaré map cycles . . . . .	106
5.4 There goes the neighborhood . . . . .	107
résumé 108 commentary 109 exercises 110 references 110	
<b>6 Go straight</b>	<b>111</b>
6.1 Changing coordinates . . . . .	112
6.2 Rectification of flows . . . . .	113
6.3 Collinear helium . . . . .	114
6.4 Rectification of maps . . . . .	119
6.5 Rectification of a periodic orbit . . . . .	120
6.6 Cycle Floquet multipliers are metric invariants . . . . .	121
résumé 123 commentary 123 exercises 125 references 125	
<b>7 Hamiltonian dynamics</b>	<b>127</b>
7.1 Hamiltonian flows . . . . .	128
7.2 Symplectic group . . . . .	130
7.3 Stability of Hamiltonian flows . . . . .	132
7.4 Symplectic maps . . . . .	134
7.5 Poincaré invariants . . . . .	137
résumé 138 commentary 139 exercises 142 references 143	
<b>8 Billiards</b>	<b>145</b>
8.1 Billiard dynamics . . . . .	145
8.2 Stability of billiards . . . . .	147
résumé 150 commentary 150 exercises 151 references 151	
<b>9 World in a mirror</b>	<b>154</b>
9.1 Discrete symmetries . . . . .	155
9.2 Symmetries of solutions . . . . .	163
9.3 Relative periodic orbits . . . . .	168
9.4 Dynamics reduced to fundamental domain . . . . .	169
9.5 Invariant polynomials . . . . .	171
résumé 172 commentary 174 exercises 176 references 177	
<b>10 Relativity for cyclists</b>	<b>180</b>
10.1 Continuous symmetries . . . . .	180
10.2 Symmetries of solutions . . . . .	189
10.3 Stability . . . . .	194
10.4 Reduced state space . . . . .	195
10.5 Method of images: Hilbert bases . . . . .	201
résumé 204 commentary 206 exercises 210 references 214	
<b>11 Charting the state space</b>	<b>219</b>
11.1 Qualitative dynamics . . . . .	220
11.2 Stretch and fold . . . . .	224
11.3 Temporal ordering: Itineraries . . . . .	227

11.4 Spatial ordering . . . . .	229
11.5 Kneading theory . . . . .	233
11.6 Symbolic dynamics, basic notions . . . . .	235
résumé 238 commentary 239 exercises 241 references 242	
<b>12 Stretch, fold, prune</b>	<b>244</b>
12.1 Goin' global: stable/unstable manifolds . . . . .	245
12.2 Horseshoes . . . . .	249
12.3 Symbol plane . . . . .	253
12.4 Prune danish . . . . .	256
12.5 Recoding, symmetries, tilings . . . . .	257
résumé 260 commentary 261 exercises 263 references 264	
<b>13 Fixed points, and how to get them</b>	<b>268</b>
13.1 Where are the cycles? . . . . .	269
13.2 One-dimensional maps . . . . .	273
13.3 Multipoint shooting method . . . . .	275
13.4 Flows . . . . .	277
résumé 281 commentary 282 exercises 284 references 286	
<b>II Chaos rules</b>	<b>288</b>
<b>14 Walkabout: Transition graphs</b>	<b>290</b>
14.1 Matrix representations of topological dynamics . . . . .	290
14.2 Transition graphs: wander from node to node . . . . .	292
14.3 Transition graphs: stroll from link to link . . . . .	295
résumé 299 commentary 299 exercises 301 references 301	
<b>15 Counting</b>	<b>303</b>
15.1 How many ways to get there from here? . . . . .	304
15.2 Topological trace formula . . . . .	306
15.3 Determinant of a graph . . . . .	309
15.4 Topological zeta function . . . . .	313
15.5 Infinite partitions . . . . .	315
15.6 Shadowing . . . . .	317
15.7 Counting cycles . . . . .	318
résumé 321 commentary 323 exercises 324 references 327	
<b>16 Transporting densities</b>	<b>329</b>
16.1 Measures . . . . .	330
16.2 Perron-Frobenius operator . . . . .	331
16.3 Why not just leave it to a computer? . . . . .	334
16.4 Invariant measures . . . . .	336
16.5 Density evolution for infinitesimal times . . . . .	339
16.6 Liouville operator . . . . .	341
résumé 343 commentary 344 exercises 345 references 346	

<b>17 Averaging</b>	<b>349</b>
17.1 Dynamical averaging . . . . .	349
17.2 Evolution operators . . . . .	355
17.3 Averaging in open systems . . . . .	359
17.4 Lyapunov exponents . . . . .	362
résumé 366 commentary 366 exercises 368 references 368	
<b>18 Trace formulas</b>	<b>371</b>
18.1 A trace formula for maps . . . . .	372
18.2 A trace formula for flows . . . . .	377
18.3 An asymptotic trace formula . . . . .	380
résumé 381 commentary 382 exercises 382 references 383	
<b>19 Spectral determinants</b>	<b>384</b>
19.1 Spectral determinants for maps . . . . .	384
19.2 Spectral determinant for flows . . . . .	386
19.3 Dynamical zeta functions . . . . .	388
19.4 False zeros . . . . .	392
19.5 Spectral determinants vs. dynamical zeta functions . . . . .	392
19.6 All too many eigenvalues? . . . . .	394
résumé 395 commentary 396 exercises 397 references 398	
<b>20 Cycle expansions</b>	<b>400</b>
20.1 Pseudocycles and shadowing . . . . .	401
20.2 Construction of cycle expansions . . . . .	403
20.3 Periodic orbit averaging . . . . .	408
20.4 Cycle formulas for dynamical averages . . . . .	410
20.5 Cycle expansions for finite alphabets . . . . .	414
20.6 Stability ordering of cycle expansions . . . . .	415
résumé 417 commentary 418 exercises 420 references 422	
<b>21 Discrete factorization</b>	<b>423</b>
21.1 Preview . . . . .	424
21.2 Discrete symmetries . . . . .	426
21.3 Dynamics in the fundamental domain . . . . .	427
21.4 Factorizations of dynamical zeta functions . . . . .	431
21.5 $C_2$ factorization . . . . .	433
21.6 $D_3$ factorization: 3-disk game of pinball . . . . .	434
résumé 436 commentary 437 exercises 437 references 438	
<b>III Chaos: what to do about it?</b>	<b>440</b>
<b>22 Why cycle?</b>	<b>442</b>
22.1 Escape rates . . . . .	442
22.2 Natural measure in terms of periodic orbits . . . . .	445
22.3 Correlation functions . . . . .	446
22.4 Trace formulas vs. level sums . . . . .	448
résumé 449 commentary 450 exercises 451 references 452	

<b>23 Why does it work?</b>	<b>454</b>
23.1 Linear maps: exact spectra . . . . .	455
23.2 Evolution operator in a matrix representation . . . . .	459
23.3 Classical Fredholm theory . . . . .	462
23.4 Analyticity of spectral determinants . . . . .	464
23.5 Hyperbolic maps . . . . .	469
23.6 Physics of eigenvalues and eigenfunctions . . . . .	471
23.7 Troubles ahead . . . . .	473
résumé 474 commentary 476 exercises 478 references 478	
<b>24 Intermittency</b>	<b>481</b>
24.1 Intermittency everywhere . . . . .	482
24.2 Intermittency for pedestrians . . . . .	484
24.3 Intermittency for cyclists . . . . .	496
24.4 BER zeta functions . . . . .	503
résumé 506 commentary 506 exercises 508 references 509	
<b>25 Deterministic diffusion</b>	<b>511</b>
25.1 Diffusion in periodic arrays . . . . .	512
25.2 Diffusion induced by chains of 1-dimensional maps . . . . .	516
25.3 Marginal stability and anomalous diffusion . . . . .	523
résumé 526 commentary 527 exercises 529 references 529	
<b>26 Turbulence?</b>	<b>531</b>
26.1 Fluttering flame front . . . . .	532
26.2 Infinite-dimensional flows: Numerics . . . . .	535
26.3 Visualization . . . . .	537
26.4 Equilibria of equilibria . . . . .	538
26.5 Why does a flame front flutter? . . . . .	540
26.6 Intrinsic parametrization . . . . .	542
26.7 Energy budget . . . . .	543
résumé 546 commentary 547 exercises 547 references 548	
<b>27 Irrationally winding</b>	<b>550</b>
27.1 Mode locking . . . . .	551
27.2 Local theory: “Golden mean” renormalization . . . . .	556
27.3 Global theory: Thermodynamic averaging . . . . .	558
27.4 Hausdorff dimension of irrational windings . . . . .	560
27.5 Thermodynamics of Farey tree: Farey model . . . . .	562
résumé 564 commentary 564 exercises 567 references 568	
<b>IV The rest is noise</b>	<b>571</b>
<b>28 Noise</b>	<b>573</b>
28.1 Deterministic transport . . . . .	574
28.2 Brownian diffusion . . . . .	575
28.3 Noisy trajectories: Continuous time . . . . .	578
28.4 Noisy maps: Discrete time . . . . .	581

28.5 All nonlinear noise is local . . . . .	583
28.6 Weak noise: Hamiltonian formulation . . . . .	585
résumé 587 commentary 587 exercises 590 references 591	
<b>29 Relaxation for cyclists</b>	<b>595</b>
29.1 Fictitious time relaxation . . . . .	596
29.2 Discrete iteration relaxation method . . . . .	601
29.3 Least action method . . . . .	605
résumé 605 commentary 606 exercises 609 references 609	
<b>V Quantum chaos</b>	<b>612</b>
<b>30 Prologue</b>	<b>614</b>
30.1 Quantum pinball . . . . .	615
30.2 Quantization of helium . . . . .	617
commentary 618 references 619	
<b>31 Quantum mechanics the short short version</b>	<b>620</b>
exercises 623	
<b>32 WKB quantization</b>	<b>625</b>
32.1 WKB ansatz . . . . .	625
32.2 Method of stationary phase . . . . .	628
32.3 WKB quantization . . . . .	629
32.4 Beyond the quadratic saddle point . . . . .	631
résumé 632 commentary 633 exercises 634 references 634	
<b>33 Semiclassical evolution</b>	<b>635</b>
33.1 Hamilton-Jacobi theory . . . . .	635
33.2 Semiclassical propagator . . . . .	644
33.3 Semiclassical Green function . . . . .	647
résumé 653 commentary 654 exercises 656 references 657	
<b>34 Semiclassical quantization</b>	<b>658</b>
34.1 Trace formula . . . . .	658
34.2 Semiclassical spectral determinant . . . . .	664
34.3 One-dof systems . . . . .	665
34.4 Two-dof systems . . . . .	666
résumé 667 commentary 668 exercises 670 references 670	
<b>35 Quantum scattering</b>	<b>672</b>
35.1 Density of states . . . . .	672
35.2 Quantum mechanical scattering matrix . . . . .	676
35.3 Krein-Friedel-Lloyd formula . . . . .	677
35.4 Wigner time delay . . . . .	680
commentary 682 exercises 683 references 683	

<b>36 Chaotic multiscattering</b>	<b>686</b>
36.1 Quantum mechanical scattering matrix . . . . .	687
36.2 $N$ -scatterer spectral determinant . . . . .	690
36.3 Semiclassical 1-disk scattering . . . . .	694
36.4 From quantum cycle to semiclassical cycle . . . . .	701
36.5 Heisenberg uncertainty . . . . .	704
commentary 704 references 705	
<b>37 Helium atom</b>	<b>706</b>
37.1 Classical dynamics of collinear helium . . . . .	707
37.2 Chaos, symbolic dynamics and periodic orbits . . . . .	708
37.3 Local coordinates, Jacobian matrix . . . . .	712
37.4 Getting ready . . . . .	714
37.5 Semiclassical quantization of collinear helium . . . . .	716
résumé 723 commentary 723 exercises 725 references 726	
<b>38 Diffraction distraction</b>	<b>727</b>
38.1 Quantum eavesdropping . . . . .	727
38.2 An application . . . . .	733
résumé 738 commentary 739 exercises 740 references 741	
<b>Epilogue</b>	<b>743</b>
<b>Index</b>	<b>748</b>

<b>A A brief history of chaos</b>	<b>767</b>
A.1 Chaos is born . . . . .	767
A.2 Chaos with us . . . . .	772
A.3 Death of the Old Quantum Theory . . . . .	779
commentary 782 exercises 783	
<b>B Linear stability</b>	<b>787</b>
B.1 Linear algebra . . . . .	787
B.2 Eigenvalues and eigenvectors . . . . .	789
B.3 Eigenspectra: what to make out of them? . . . . .	796
B.4 Stability of Hamiltonian flows . . . . .	798
B.5 Monodromy matrix for Hamiltonian flows . . . . .	799
exercises 802 references 802	
<b>C Finding cycles</b>	<b>804</b>
C.1 Newton-Raphson method . . . . .	804
C.2 Hybrid Newton-Raphson / relaxation method . . . . .	805
<b>D Symbolic dynamics techniques</b>	<b>808</b>
D.1 Topological zeta functions for infinite subshifts . . . . .	808
D.2 Prime factorization for dynamical itineraries . . . . .	816
<b>E Counting itineraries</b>	<b>820</b>
E.1 Counting curvatures . . . . .	820
exercises 821	
<b>F Implementing evolution</b>	<b>822</b>
F.1 Koopmania . . . . .	822
F.2 Implementing evolution . . . . .	824
commentary 827 exercises 827 references 828	
<b>G Transport of vector fields</b>	<b>830</b>
G.1 Evolution operator for Lyapunov exponents . . . . .	830
G.2 Advection of vector fields by chaotic flows . . . . .	835
commentary 839 exercises 839 references 839	
<b>H Discrete symmetries of dynamics</b>	<b>841</b>
H.1 Preliminaries and definitions . . . . .	841
H.2 Invariants and reducibility . . . . .	848
H.3 Lattice derivatives . . . . .	851
H.4 Periodic lattices . . . . .	855
H.5 Discrete Fourier transforms . . . . .	856
H.6 $C_{4v}$ factorization . . . . .	860
H.7 $C_{2v}$ factorization . . . . .	864
H.8 Hénon map symmetries . . . . .	866
commentary 867 exercises 867 references 869	

<b>I Convergence of spectral determinants</b>	<b>872</b>
I.1 Curvature expansions: geometric picture . . . . .	872
I.2 On importance of pruning . . . . .	875
I.3 Ma-the-matical caveats . . . . .	876
I.4 Estimate of the $n$ th cumulant . . . . .	877
I.5 Dirichlet series . . . . .	879
commentary 880	
<b>J Infinite dimensional operators</b>	<b>881</b>
J.1 Matrix-valued functions . . . . .	881
J.2 Operator norms . . . . .	883
J.3 Trace class and Hilbert-Schmidt class . . . . .	884
J.4 Determinants of trace class operators . . . . .	886
J.5 Von Koch matrices . . . . .	889
J.6 Regularization . . . . .	891
exercises 893 references 893	
<b>K Thermodynamic formalism</b>	<b>895</b>
K.1 Rényi entropies . . . . .	895
K.2 Fractal dimensions . . . . .	900
résumé 904 commentary 904 exercises 905 references 905	
<b>L Statistical mechanics recycled</b>	<b>907</b>
L.1 The thermodynamic limit . . . . .	907
L.2 Ising models . . . . .	910
L.3 Fisher droplet model . . . . .	913
L.4 Scaling functions . . . . .	918
L.5 Geometrization . . . . .	921
résumé 928 commentary 929 exercises 929 references 930	
<b>M Noise/quantum corrections</b>	<b>932</b>
M.1 Periodic orbits as integrable systems . . . . .	932
M.2 The Birkhoff normal form . . . . .	936
M.3 Bohr-Sommerfeld quantization of periodic orbits . . . . .	937
M.4 Quantum calculation of $\hbar$ corrections . . . . .	939
references 945	
<b>S Projects</b>	<b>948</b>
S.1 Deterministic diffusion, zig-zag map . . . . .	950
references 955	
S.2 Deterministic diffusion, sawtooth map . . . . .	956

**Contributors**

No man but a blockhead ever wrote except for money  
—Samuel Johnson

This book is a result of collaborative labors of many people over a span of several decades. Coauthors of a chapter or a section are indicated in the byline to the chapter/section title. If you are referring to a specific coauthored section rather than the entire book, cite it as (for example):

C. Chandre, F.K. Diakonos and P. Schmelcher, section “Discrete cyclist relaxation method,” in P. Cvitanović, R. Artuso, R. Mainieri, G. Tanner and G. Vattay, *Chaos: Classical and Quantum* (Niels Bohr Institute, Copenhagen 2010); ChaosBook.org/version13.

Do not cite chapters by their numbers, as those change from version to version. Chapters without a byline are written by Predrag Cvitanović. Friends whose contributions and ideas were invaluable to us but have not contributed written text to this book, are credited in the acknowledgments.

**Roberto Artuso**

16 Transporting densities .....	329
18.2 A trace formula for flows .....	377
22.3 Correlation functions .....	446
24 Intermittency .....	481
25 Deterministic diffusion .....	511

**Ronnie Mainieri**

2 Flows .....	37
3.2 The Poincaré section of a flow .....	62
4 Local stability .....	75
6.1 Understanding flows .....	114
11.1 Temporal ordering: itineraries .....	220
Appendix A: A brief history of chaos .....	767

**Gábor Vattay****Gregor Tanner**

24 Intermittency .....	481
Appendix B.5: Jacobians of Hamiltonian flows .....	799

**Arindam Basu**

Rössler flow figures, tables, cycles in chapters 11, 13 and exercise 13.10

**Ofer Biham**

29.1 Cyclists relaxation method .....	596
---------------------------------------	-----

**Daniel Borrero** Oct 23 2008, soluCycles.tex

Solution 13.15

**Cristel Chandre**

29.1 Cyclists relaxation method .....	596
29.2 Discrete cyclists relaxation methods .....	601

**Freddy Christiansen**

13.2 One-dimensional mappings .....	273
13.3 Multipoint shooting method .....	275

**Per Dahlqvist**

24 Intermittency .....	481
29.3 Orbit length extremization method for billiards .....	605

**Carl P. Dettmann**

20.6 Stability ordering of cycle expansions .....	415
---------------------------------------------------	-----

**Fotis K. Diakonos**

29.2 Discrete cyclists relaxation methods .....	601
-------------------------------------------------	-----

**G. Bard Ermentrout**

Exercise 5.1

**Mitchell J. Feigenbaum**

Appendix B.4: Symplectic invariance .....	798
-------------------------------------------	-----

**Sarah Flynn**

solutions 3.5 and 3.6

**Jonathan Halcrow**

Example 3.4: Sections of Lorenz flow .....	61
Example 4.7: Stability of Lorenz flow equilibria .....	86
Example 4.8: Lorenz flow: Global portrait .....	88
Example 9.14: Desymmetrization of Lorenz flow .....	166
Example 11.4: Lorenz flow: a 1-dimensional return map .....	225
Exercises 9.9 and figure 2.5 .....	

**Kai T. Hansen**

11.3 Unimodal map symbolic dynamics .....	227
15.5 Topological zeta function for an infinite partition .....	315
11.5 kneading theory .....	233
figures throughout the text .....

Rössler flow figures, tables, cycles in chapters 2, 13 and exercise 13.10	
---------------------------------------------------------------------------	--

**Edward A. Spiegel**

2 Flows .....	37
16 Transporting densities .....	329

**Luz V. Vela-Arevalo**

7.1 Hamiltonian flows .....	128
Exercises 7.1, 7.3, 7.5	

**Rebecca Wilczak**

Figure 10.1, figure 10.4	
Exercise 10.35	
Solutions 10.1, 10.4, 10.5, 10.6, 10.7, 10.13, 10.20, 10.21, 10.22, 10.26, 10.27, 10.28, 10.29, 10.31	

**Lei Zhang**

Solutions 1.1, 2.1

**Acknowledgments**

I feel I never want to write another book. What's the good!  
I can eke living on stories and little articles, that don't cost  
a tittle of the output a book costs. Why write novels any  
more!

—D.H. Lawrence

This book owes its existence to the Niels Bohr Institute's and Nordita's hospitable and nurturing environment, and the private, national and cross-national foundations that have supported the collaborators' research over a span of several decades. P.C. thanks M.J. Feigenbaum of Rockefeller University; D. Ruelle of I.H.E.S., Bures-sur-Yvette; I. Procaccia of Minerva Center for Nonlinear Physics of Complex Systems, Weizmann Institute of Science; P.H. Damgaard of the Niels Bohr International Academy; G. Mazenko of U. of Chicago James Franck Institute and Argonne National Laboratory; T. Geisel of Max-Planck-Institut für Dynamik und Selbstorganisation, Göttingen; I. Andrić of Rudjer Bošković Institute; P. Hemmer of University of Trondheim; The Max-Planck Institut für Mathematik, Bonn; J. Lowenstein of New York University; Edificio Celi, Milano; Fundação de Faca, Porto Seguro; and Dr. Dj. Cvitanović, Kostrena, for the hospitality during various stages of this work, and the Carlsberg Foundation, Glen P. Robinson, Humboldt Foundation and National Science Foundation grant DMS-0807574 for partial support.

The authors gratefully acknowledge collaborations and/or stimulating discussions with E. Aurell, M. Avila, V. Baladi, D. Barkley, B. Brenner, A. de Carvalho, D.J. Driebe, B. Eckhardt, M.J. Feigenbaum, J. Frøjland, S. Froehlich, P. Gaspar, P. Gaspard, J. Guckenheimer, G.H. Gunaratne, P. Grassberger, H. Gutowitz, M. Gutzwiler, K.T. Hansen, P.J. Holmes, T. Janssen, R. Klages, Y. Lan, B. Lauritsen, J. Milnor, M. Nordahl, I. Procaccia, J.M. Robbins, P.E. Rosenqvist, D. Ruelle, G. Russberg, B. Sandstede, M. Sieber, D. Sullivan, N. Søndergaard, T. Tél, C. Tresser, R. Wilczak, and D. Wintgen.

We thank Dorte Glass, Tzatzilha Torres Guadarrama and Raenell Soller for typing parts of the manuscript; D. Borro, B. Lautrup, J.F. Gibson and D. Viswanath for comments and corrections to the preliminary versions of this text; M.A. Porter for patiently and critically reading the manuscript, and then lengthening by the 2013 definite articles hitherto missing; M.V. Berry for the quotation on page 767; H. Fogedby for the quotation on page 464; J. Greensite for the quotation on page 7; S. Ortega Arango for the quotation on page 16; Ya.B. Pesin for the remarks quoted on page 783; M.A. Porter for the quotations on pages 7.1, 17, 13, 1.6 and A.2.1; E.A. Spiegel for quotation on page 3; and E. Valesco for the quotation on page 25.

F. Haake's heartfelt lament on page 377 was uttered at the end of the first conference presentation of cycle expansions, in 1988. G.P. Morris's advice to students as how to read the introduction to this book, page 6, was offered during a 2002 graduate course in Dresden. K. Huang's C.N. Yang interview quoted on page 337 is available on [ChaosBook.org/extras](http://ChaosBook.org/extras). T.D. Lee remarks on as to who is to blame, page 37 and page 269, as well as M. Shub's helpful technical remark on page 476 came during the Rockefeller University December 2004 "Feigenbaum Fest." Quotes on pages 37, 127, and 334 are taken from a book review by J. Guckenheimer [1.1].

Who is the 3-legged dog reappearing throughout the book? Long ago, when we were innocent and knew not Borel measurable  $\alpha$  to  $\Omega$  sets, P. Cvitanović asked V. Baladi a question about dynamical zeta functions, who then asked J.-P. Eckmann, who then asked D. Ruelle. The answer was transmitted back: "The master says: 'It is holomorphic in a strip'." Hence His Master's Voice logo, and the 3-legged dog is us, still eager to fetch the bone. The answer has made it to the book, though not precisely in His Master's voice. As a matter of fact, the answer *is* the book. We are still chewing on it.

Profound thanks to all the unsung heroes—students and colleagues, too numerous to list here—who have supported this project over many years in many ways, by surviving pilot courses based on this book, by providing invaluable insights, by teaching us, by inspiring us.
